

Neural Connectivity

Human signals become coordinated movement. RIDIER turns workforce intelligence into clearer adoption decisions and confident organizational transformation.

RIDIER

WORKFORCE INTELLIGENCE

Intelligence is relational.

RIDIER does not reduce people to a single score. It listens across the workforce, detects meaningful patterns, and helps leaders understand how organizations move through change.

01 Human signals

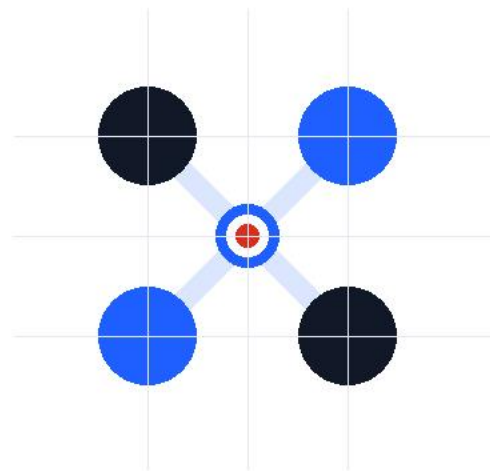

Distinct perspectives remain visible.

02 Alignment

Connections resolve scattered information.

03 Adoption

Movement converges toward coordinated action.

FOUR SIGNALS / ONE COORDINATED FIELD

The open center represents interpretation—not surveillance. The red point marks the moment insight becomes action.

Built to lead quietly.

PRIMARY HORIZONTAL LOCKUP

Use this form in public communications, presentations, and spacious product headers.

REVERSED LOCKUP

One identity. Every scale.

48px

72px

Below 24 px, remove the red center point. The signal nodes and open aperture remain distinct at favicon size.

Authority with a signal.

Blue carries the brand. Navy creates enterprise authority. White gives the system room to think. Red is never decorative—it marks one meaningful signal, decision, or risk.

Clear enough for decisions.

Sora

Brand voice / Headings / Wordmark

Manrope

Product language and communication

Understand the workforce. Move transformation forward.

Sora brings geometric authority without coldness. Manrope keeps complex intelligence readable, direct, and human.

Enterprise-ready by design.

EXECUTIVE BRIEFING

Adoption intelligence for human transformation.

Protect the signal.

01 CLEAR SPACE

Keep one node diameter clear on every side.

03 BACKGROUNDS

Use white, cloud, navy, or quiet photography.

05 NO EFFECTS

No shadows, bevels, gradients, outlines, or rotation.

02 MINIMUM SIZE

Horizontal: 120 px. Symbol: 16 px simplified.

04 RED CONTROL

One signal point only. Never turn red into a field.

06 NO REBUILDING

Use approved artwork; never typeset a substitute.

x = node diameter
